

FLO

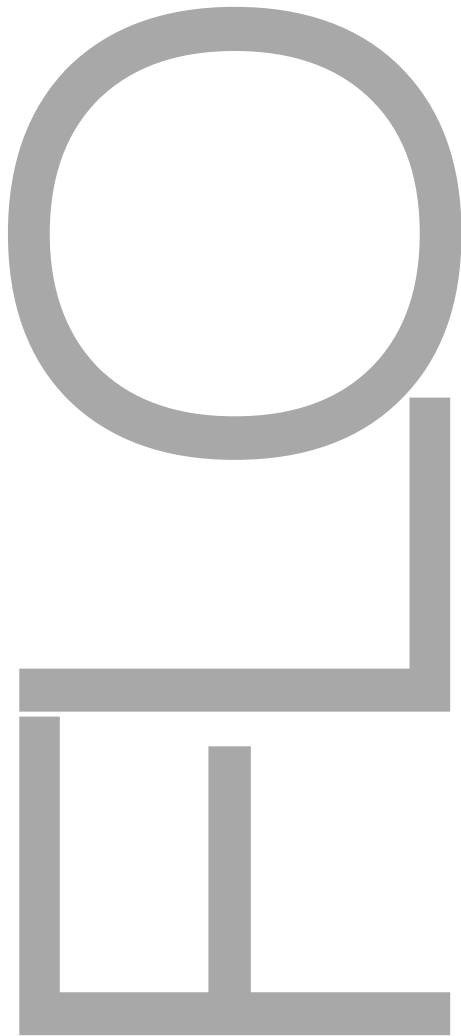

crystallite filter media

Noria FLO filter media is the perfect companion for any media filter, especially the Noria EVO:S filter, delivering high performance filtration through crystallite granules, to filter out even the tiniest particles.

A PERFORMANCE PRODUCT BY

FLO CRYSTALLITE FILTER MEDIA

Noria FLO is now 100% recycled, environmentally friendly media that lasts up to 3 times longer than traditional Silica sand. FLO easily filters small contaminant particles and is compatible with all pool treatments such as coagulants and metal removers.

Unlike sand, the angular, non regular shape of the particles means that the media bed tends to fit together, forming tighter path ways for the pool water to

pass through, giving higher grades of filtration and less chance of media channelling. Additionally FLO crystallite structure helps the media “clean” itself more efficiently in the backwash and rinse cycle.

FLO’s durability and high performance makes it the best choice for modern pool filtration systems.

SPECIFICATIONS

Product	Grade	Size
FLO:F	FINE	15kg
FLO:C	COARSE	15kg
